WHY MAY YOU FIND SEARCH ACE USEFUL?

- + Adaptive card gained a lot of attention last year
- + A way to expose content search almost natively in mobile
- + Support for new Viva experience in desktop
- + Fast & easy solution

HOW TO DO IT?

- + Implement Search API client and expose setQuery method.
- + Create an adaptive card with input and search button
- + Create an adaptive card to present the results (thanks to Joao for the template)
- + Add navigation events
- + Enjoy

DEMO TIME

IMPORTANT DETAILS?

- + Using quickViewNavigator is a great way to allow users getting back to search input quick view.
- + I'm using my own library for search client, but feel free to use pnp.js
- + Initial query can drastically change the context of our search. With this property we can support only document search or only news search, making this ACE quite versatile.
